📍 Hsinchu, Taiwan ✉ sharon.lin@iss.nthu.edu.tw 🔗 poyasharonlin.github.io/website/ 📱 PoYaSharonLin

Education

- | | |
|--|----------------------|
| MBA National Tsing Hua University , College of Technology Management, Institute of Service Science | Sept 2024 – Jul 2026 |
| <ul style="list-style-type: none"> GPA: 4.06 / 4.30 IS-relevant coursework: Experiment and Causal Inference (A+), Computational Statistics for Data Science (A+), Text Mining (A+), Deep Learning for Business Analytics (A+), Service Security (A+), Service-Oriented Architecture (A) | |
| Exch. Technical University of Munich , TUM School of Management | Apr 2023 – Sept 2023 |
| <ul style="list-style-type: none"> Overall grade: 1.3 / 5.0 (German scale; 1.0 = highest) Coursework: Business Analytics (1.3), Reinforcement Learning (1.3), Operations and Supply Chain Management Seminar (1.3) | |
| BA National Cheng Kung University , Foreign Languages and Literature | Sept 2019 – Jan 2024 |
| <ul style="list-style-type: none"> GPA: 4.00 / 4.30 Quantitative coursework: Quantitative Data Processing for Language Majors (A+), Data Mining (A), Data Structures (A), Calculus 1 (A+), Statistic 1 & 2 (A-) | |

Research Experience

- | | |
|--|-------------------------------------|
| Reducing Misreporting of Health Information through Novel Positive Appeals
Extended Abstract accepted by Taiwan Summer Workshop on Information Management (TSWIM) 2026.
Advisor: Prof. Soumya Ray | NTHU, Hsinchu
Jul 2026 |
| <ul style="list-style-type: none"> Designed an Encouragement-Offering intervention integrating Regulatory Focus Theory (Higgins, 1997) with the coping-appraisal components of Fear Appeal Theory (Wall & Buche, 2017), operationalized through Response Activation Model slider bars. Developed a randomized between-subjects experiment (N=450) collecting pixel-level mouse movement data using Javascript and upload bin data to Amazon S3 Block randomization was implemented using Redis to ensure an equal allocation of participants to each experimental condition. | |
| Hybrid Electric Vehicle Sales Prediction Using ANN, ANFIS, and Electronic Word of Mouth
National Science and Technology Council Undergraduate Research Grant (NSTC 112-2813-C-006-026-)
Advisor: Prof. Lih-Chyun Shu | NCKU, Tainan
Jul 2022 – Feb 2023 |
| <ul style="list-style-type: none"> Implemented Artificial Neural Network and Adaptive Neuro-Fuzzy Inference System models for time-series HEV sales prediction, demonstrating that ANN outperformed ANFIS on monthly sales data. Empirically tested whether single-platform electronic word of mouth signals improve time-series prediction accuracy, finding the contribution to be limited and identifying multi-platform aggregation as a methodological direction. | |

Industry Experience

- | | |
|---|---|
| Micron Technology , Business Planning Intern | Taichung, Taiwan
Jul 2025 – Aug 2025 |
|---|---|

- Built a production Streamlit dashboard integrating LLM-based link retrieval (**Autogen** library) with **Plotly** visualizations for wafer production analysis used by the planning team.
- Reduced LLM response latency from 4 s to 1 s by hashing recommended prompts and caching outputs in SQLite3.
- Implemented week-range callback functions for dynamic analysis of HBM versus non-HBM product distribution and process series percentages.

Selected Projects

AcaRadar – Full-stack Web Application for Cross-Domain Academic Paper Discovery

github.com/UpstartSangria

- Led design and implementation of a web application that lets researchers embed personal interests and automatically retrieve up-to-date paper metadata from the arXiv API.
- Architected the backend using **Domain-Driven Design** and Repository patterns; built RESTful APIs with functional programming principles (result monads) for reliability.
- Integrated **AWS SQS** for asynchronous, message-driven microservices to handle paper metadata ingestion at scale.

MindBigData – MNIST Brain Digit Classification from EEG Signals

github.com/MNISTMindBigData

- Built a computer vision pipeline with EEG preprocessing including Artifact Subspace Reconstruction, bandpass filtering, and ICA decomposition.
- Deployed an interactive classification web app at bci-deploy.streamlit.app that loads a pretrained model and accepts user-uploaded .npy files for inference.

Technical Skills

Research methods: randomized experimental design, behavioral trace analysis (mouse-tracking), survey instrument design, deep learning models

Programming: Python (pandas, scikit-learn, PyTorch), R, SQL, Ruby.

Engineering: Streamlit, Plotly, AWS SQS, SQLite, Domain-Driven Design, RESTful API design, Roda, Hugo.

Analytics tools: Tableau, Power BI.

Languages and Standardized Tests

TOEFL iBT: 107 / 120 (Reading 28, Listening 29, Speaking 25, Writing 25).

Languages: Mandarin Chinese (native), English (advanced), German (Goethe-Zertifikat B1).
